Gameplay Programmer with 3 years of hands-on experience developing gameplay systems in Unreal Engine 5 (C++/Blueprints) and Unity (C#). Specialized in combat systems, multiplayer networking, AI behaviors, gameplay architecture, and performance optimization. Experienced working in remote collaborative environments, building scalable gameplay features, reusable systems, and designer-friendly workflows.

WORK EXPERIENCE

Game Developer (Unreal Engine) Oct-2025 – Dec 2025 Alone Clone, Remote

- Developed gameplay systems in Unreal Engine 5 using C++ and Blueprints with a focus on scalability, modularity, and maintainability.
- Implemented multiplayer gameplay features including actor replication, RPC communication, session handling, and server-client gameplay synchronization.
- Built enemy AI systems using Behavior Trees, State Machines, AI perception, and custom gameplay logic for combat encounters.
- Created reusable gameplay components and debugging tools to improve iteration speed and support designer-driven workflows.
- Collaborated remotely using version control and production pipelines to deliver gameplay features and bug fixes efficiently.

Game Developer (Unity Engine) Sept 2024 – April 2025 Zertzura Studio, Remote

- Developed gameplay systems and core mechanics in Unity (C#) for a 2D slime platformer and a mobile word puzzle game.
- Implemented progression systems, scoring systems, game states, and responsive player interaction mechanics.
- Built UI systems using Unity UI and TextMeshPro, including gameplay feedback, progression flow, and menu systems.
- Optimized gameplay code and refactored systems for improved performance, maintainability, and production stability.
- Worked closely with designers and artists in a remote production environment using Git-based workflows.

Mobalytics Remote Extern April 2024– May 2024 Extern, Remote

- Conducted gameplay and market analysis across multiple game genres focusing on player engagement, retention, and monetization strategies.
- Evaluated gameplay loops, progression systems, core mechanics, and player psychology to identify design opportunities.
- Presented structured research findings and recommendations based on genre analysis and player behavior trends.

EDUCATION

Chandigarh University, Mohali, Punjab , IN 2022-2026

Bachelor of Engineering - Computer Science (Graphics And Gaming) CGPA:8.41

SKILLS & OTHER

Technical Skills: Unreal Engine 5 (C++, Blueprints), Unity (C#), Git, C++, C#, SQL, UI/UX (Figma, Affinity), Blender (Beginner)

Languages: Hindi(Native), English (Conversational)
